DETAILED ACTION

1. This is responsive to the application filed on January 14, 2004. Claims 1-47 are pending.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-33, drawn to context switching, classified in class 718, subclass 108.
 - II. Claims 34-47, drawn to high level application control, classified in class 719, subclass 320.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I is directed to switching between application windows. The subcombination has separate utility such as communication of data, commands, or messages between at least one controlling script, macro or other high level controlling program, and at least one controlled application program.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
